THE WASHING SOLUTION CONCERNED WITH A CLEANER ENVIRONMENT

A new large capacity stainless steel tank allows Aquadyne to work peacefully. The washing power of the Aquadyne is de-

monstrated by its 80 liters/60 bar pump, which is capable of adapting to any extreme conditions.

① The washing bar, movable from left-to-right and hydraulically lifted, equipped with two side jets, provides a working range of 1400 mm to 3300 mm. These features allow AQUADYNE to meet all the demands of urban property. All these advantages provide a very high sensitivity to the spray bar responding to the operator's requests through the function control joystick.

② All the wash controls are grouped on a control box to provide great comfort and ease of use to the operator. The green "Start and Wash" button allows a quick start of the wash mode. A function on the joystick allows the operator to have full control over the water supply to the spray bar.

③ A 360° washing boom, positioned on the tank, allows the AQUADYNE to adapt to all working conditions, even in inaccessible areas. The boom can be connected to the main pump or to an attached high-pressure pump of 200 bar for a targeted stripping function.

④ An articulated automatic reel of 15 m attached to the rear of the chassis is added to the complete washing function offered by AQUADYNE.

Two removable side jets essential for your washing operations.

A brine bar for frozen areas.

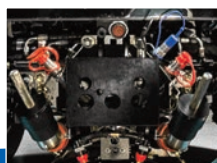

The AQUADYNE tank is specially designed to be a brine reservoir.

⑥ THE FLEX SOLUTION

With its front layout, the AQUADYNE-Flex is the washer - tool version that meets your winter needs.

Also available:

- a salt machine with a capacity of 200 liters
- a rotary snow removal brush
- a robust snow removal blade
