AQUAZURA

CLEAN THE CITY

MATHIEU
FAYAT GROUP

IT BRUSHES UP A CLEANER FUTURE FOR YOU

1 SHAMPOOING AND SOAKING:

The degreasing water, mixture with the action of the brushes, enables an efficient washing-stripping. Distributed at

low pressure (3 bar) on the brushes, the liquid removes the encrusted substances.

2 THE DEGREASER CONTAINER:

With a capacity of 20 liters, it provides the user with a comfortable operating period. Although active, the degreaser agent is 100% biodegradable.

3 THE USED WATER RECYCLING SYSTEM:

The AQUAZURA has its own on-board suction and storage system for the dirty water. With a clean water capacity of 1000 liters, the operating autonomy of the AQUAZURA is exceptional: A water

consumption divided by 8 so 1000 liters for 2.5 hours of work.

4 THE VENTURI SYSTEM : Connected to the clean water delivery line, the venturi system allows the in-cab dosing of the degreaser flow according to the ground conditions.

5 BRUSHING:

The adjustment of ground pressure and brush rotation speed covers a working width of 1280 mm to 2100 mm, giving AQUAZURA a high efficiency in all working configurations.

6 THE SUCTION:

With the scrapers, the sprinkler covers a ground span of 1600 mm, making it easier to suck-up the wastewater. Reversible, these scrapers benefit from a double life of use.

The suction mouth also has a trap for large waste, which, by combining the brushing and suction functions, allows the AQUAZURA to dispose of waste such as paper, cans, and glass bottles.

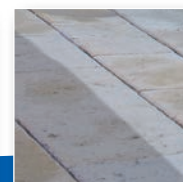

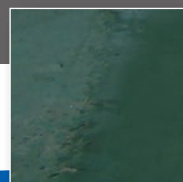

AQUAZURA MC210 : The tested solution for all types of ground

Whatever your ground types: Industrial, urban, highway, airport, or even military, the AQUAZURA guarantees the difference in cleanliness and hygiene of the roadway.

The brushing process used by AQUAZURA leaves a real sense of cleanliness after it passes.
